

SEALMASTER® SS GOLD™ MOUNTED BALL BEARINGS

SEALMASTER® SS GOLD MOUNTED BALL BEARINGS

Sealmaster Stainless Steel Gold mounted bearings feature a stainless steel insert with high performance seal technology available in multiple housing configurations with set screw collars. The multiple lip FKM rubber seal and stainless steel flinger provide excellent washdown and contamination resistance in addition to retaining food grade grease. Specifically engineered for industries with corrosive wash down environments such as food and beverage, pharmaceuticals and chemical processing. Available with a lubrication fitting or as a reduced maintenance "sealed for life" design with a stainless steel plug. SS Gold mounted ball bearings meet IP69K standards providing a solution that delivers assurance the system is cleaner, safer, and higher performing.

SEALMASTER® SS GOLD NOMENCLATURE

Corrosion Resistant

Housing Type (see below)

Housing Material

S - Stainless Steel

Stainless Steel

Bore Size

Inch - ##/16" (ex. 20/16 = 1 1/4")

FS - SS16

Housing Type

P - Pillow Block

FT - 2 Bolt Flange

F - 4 Bolt Flange

FB - Flange Bracket

FEATURES AND BENEFITS

BEARING RACES

The inner and outer ring of the Sealmaster® SS Gold are a 440C stainless steel which provides good load capacity and corrosion resistance for a wide range of applications and chemicals.

WIDE OUTER RACE

Sealmaster has the industry's widest outer race – 20 to 30% wider than industry standard outer races. This feature results in increased grease capacity, improved sealing options and increases the surface area for absorption of shock load.

SETSCREW LOCKING

300 series stainless steel 120° spaced, balanced three point contact minimizes inner ring distortion vibration, reduces noise, and improves reliability. The inner ring is through hardened and annealed by the set screws to reduce potential for cracking.

STAINLESS STEEL HOUSING

High quality solid base with passivated 316 stainless steel casting to provide a high level of corrosion resistance. The casting process yields a smooth, easy to clean surface. The solid construction with machined base was designed for minimal gaps without fillings.

FEATURES AND BENEFITS CONTINUED

HIGH PERFORMANCE SEAL (HPS)

The triple lip contact seal design provides multi-directional sealing to withstand the toughest food and beverage environments and retain lubrication. The 304 stainless steel flinger protects the FKM rubber seal lips from high pressure spray, contamination and provides a smooth contact surface to minimize wear. The seal cavities are factory filled with H1 food grade grease prior to shipment for additional contamination resistance. Seals conforming to an IP69K rating are dust tight and able to withstand high pressure washdown.

The illustrations below show the relative performance of several manufacturers stainless steel bearings. Complete bearings with seals are sprayed with a 5% salt solution at 100°F. The bearings operate continuously at 500 RPM for 9 hours and idle for 15 hours. The results below are after 2 months.

The 3 competitor bearings allowed moisture within the bearing causing corrosion, wear, noisy operation and the test to be stopped. The Sealmaster® bearing with improved sealing still ran quietly with no internal corrosion or wear issues where it still had significant life remaining.

The graphic below illustrates the relative performance of rubber contact seals in a slurry contamination test. The bearing is submerged halfway into a slurry mixture (as shown in illustration). The bearing rotates while a separate motor stirs the mixture. The test is stopped when the slurry mixture leaks past the seal.

Simulation of Slurry Contamination Test

FEATURES AND BENEFITS CONTINUED

LOCK PIN AND DIMPLE

The Sealmaster exclusive locking pin and dimple system provides a direct lubricant into the bearing cavity & ball path instead of around a lubrication groove, prevents outer ring rotation (sometimes referred to as “creep”), and allows $\pm 2^\circ$ static misalignment of the bearing insert

LAND RIDING RETAINER

The Sealmaster patented retainer design has land riding ribs, grease collection reservoirs and superior pocket clearance to provide more effective lubrication of the rolling elements and raceways. The non-metallic polyphenylene sulfide (PPS) advanced engineered material is chemically resistant and suitable for a wide range of temperatures (-30°F to 400°F). US patent 10,605,307 B1

SPECIALIZED FOOD GRADE LUBRICATION

The Sealmaster SS Gold bearings are factory filled with Sealmaster Food Grade grease (USDA H1 approved) which is suitable for mounted bearing lubrication where incidental contact with food products may occur in any application where clean, routine lubrication is required.

ACCESSORIES

Optional accessories are available for SS Gold bearings, allowing for greater customization specific to application needs.

PRODUCT IDENTIFICATION

Specialized laser identification for permanent brand and nomenclature identification.
